Expansion rate H(z)
LCDM (fiducial)
Einstein-de Sitter (hypothetical)
matter only: $H_0\sqrt{\Omega_m}(1+z)^{3/2}$
H(z) [km s^{-1} Mpc^{-1}]
redshift z
Cosmic expansion speed: ȧ decreases, then increases
LCDM (fiducial)
Einstein-de Sitter
minimum of ȧ at z = 0.63
(onset of acceleration)
ȧ = H(z)/(1+z) [km s^{-1} Mpc^{-1}]
redshift z
