Potentials (circle: end; square: pivot exit)
V(ϕ)/V(ϕstart)
ϕ [MP]
Starobinsky
quadratic
Field evolution (exact background)
ϕ [MP]
e-folds before end of inflation
Starobinsky
quadratic
Hubble slow-roll parameters
end of inflation: εH = 1
εH = −Ḣ/H² (thick); |ηH| (thin)
e-folds before end of inflation
