Scale factor in conditional future scenarios
scale factor a(t)
cosmic time t [Gyr]
today
Expansion rate (negative = contraction)
H(t) / H0
cosmic time t [Gyr]
LCDM (Lambda > 0)
Constant w = -0.8
Phantom w = -1.2
Phantom w = -1.5
Einstein-de Sitter (Omega_m = 1 - Omega_r)
Open matter-only (Omega_m = 0.315, no Lambda)
Closed matter-only (Omega_m = 2)
Negative Lambda (Omega_Lambda = -0.5)
