Flat LCDM (fiducial)
Einstein-de Sitter
Closed matter-only ($\Omega_m = 2$)
particle horizon of an observer at $\chi = 0$
our past light cone
event horizon (if it exists)
comoving Hubble radius c/(aH)
comoving distance χ [Gpc]
conformal time η [comoving Gpc]
conformal time η [comoving Gpc]
conformal time η [comoving Gpc]
